Bluegrass Pharmaceuticals completes key IP licensing milestone with The University of Texas at Austin

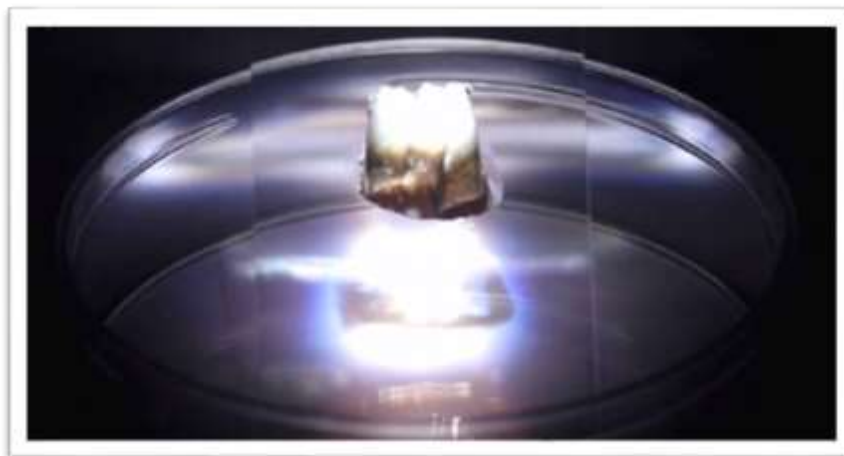

CORAL SPRINGS, FLORIDA, July 29, 2024 – Bluegrass Pharmaceuticals, a health, wellbeing & life sciences company, announced today that it has secured an intellectual property licensing option from The University of Texas at Austin for patents and IP surrounding its groundbreaking *Super Moisture Absorbent Gel* (SMAG) technology to harvest atmospheric water for use in irrigating high-value crops and more specifically cannabis.

Bluegrass Pharmaceuticals' Chief Executive Officer and Founder, Danielle Tumey, stated "It's a game-changing technology that redefines what's possible in irrigation. We're starting with high-value crops, but as the platform matures, its potential application to staple crops could reshape agriculture on a global scale – turning deserts into oases."

In addition to the issued and pending patents owned by UTA, Bluegrass has filed its own patents relating to apparatus that make use of the SMAG material and efficiently provide practical means of irrigating the plants. "There is no question the new materials are the heart of a revolutionary system," stated Bluegrass Chief Technology Officer, Jonathan Tumey, "However, effective cultivation still requires managing how harvested water is collected and distributed—tailored to the specific needs of your intended crops.

The company is establishing a University-Industry (UI) partnership with UTA and expects to provide assistance in obtaining grants, benefactions and investments to complete the laboratory research. In addition, Bluegrass is planning on providing matching funds via a *Sponsored Research Agreement* (SRA) with the University as it gets closer to commercialization.

David Tumey, Bluegrass Pharmaceuticals' Chief Operating Officer, noted "One of our next steps is to secure a strong industry partner who is established in the cannabis space to collaborate with us on the project and provide a pathway for conducting initial small-scale testing of the system. I hope the industry players can see the disruptive value of this not only for their company but for planet Earth."

Bluegrass Pharmaceuticals signs entertainment icon Nelly as strategic partner: Changing the way the world consumes botanical therapeutics

BELTON, KENTUCKY, April 23, 2019 – Bluegrass Pharmaceuticals, a botanical therapeutics company, announced today that it has entered into a strategic partnership with entertainer, icon and businessman Nelly. The partnership is Bluegrass Pharmaceuticals' first association with a high-profile public figure.

Nelly said, "A lot of people recognize me as an entertainer, but don't know about all the other projects I passionately work on. Doing something that has a positive impact on people's lives is extremely important to me. That's why I chose to partner with Bluegrass [Pharmaceuticals]. They're creating products that will have an immediate effect on the lives of thousands... probably millions. I knew I had to be involved."

Bluegrass Pharmaceuticals produces natural health and wellness products including select botanical preparations and in-home technology for extraction and consumption of botanical therapeutics. The first devices designed to facilitate in-home extraction and consumption of *Cannabis* nanotherapeutics include *High Note™*, *FizzyFreak™*, *NXtract™* & *BudderFly™*. Several other devices, botanical products and patches are under development and the company has filed several patents.

Bluegrass Pharmaceuticals' Chief Executive Officer, Dan Zhu (Danielle) Tumey, highlights the great match between Nelly's profile and the unique mission of the company: "Unlike most cannabis-derived product companies, Bluegrass Pharmaceuticals will only create "pharmaceutical grade" products, and Nelly's involvement with innovative ways of fighting health and social problems fits with our mission."

Bluegrass Pharmaceuticals utilizes a proprietary extraction process that improves the cannabinoid and terpene extraction profiles and provides complete control over the quality of the product.
